

SOCKET GRAFT CASE STUDY

Background

50 year old female patient

Non-smoker, non-contributory medical history

Fractured upper right second molar

1. Vertical fracture of the upper right second molar.

2. Fractured tooth extracted "atraumatically" under local anaesthesia.

3. Socket grafting with EthOss®.

4. Covered with hemostatic collagen sponge, no primary closure.

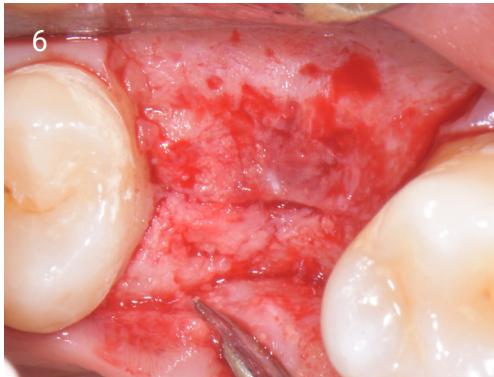

5. 12 weeks post-op.

A biphasic matrix for true bone regeneration.
Built in membrane function, high graft stability.

Ethoss Regeneration Ltd

SOCKET GRAFT CASE STUDY

6. Re-entry at 12 weeks.

7. Bone biopsy and preparation for implant placement.

8. Paltop Advanced implant placed.

9. Additional grafting with EthOss®.

10. Tension-free closure.

11. After 4 months.

A biphasic matrix for true bone regeneration.
Built in membrane function, high graft stability.

SOCKET GRAFT CASE STUDY

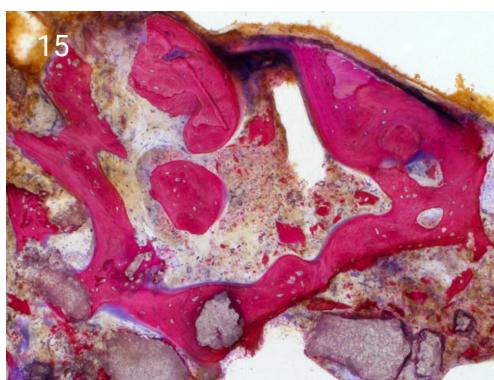

12. Penguin ISQ measurement: 74.

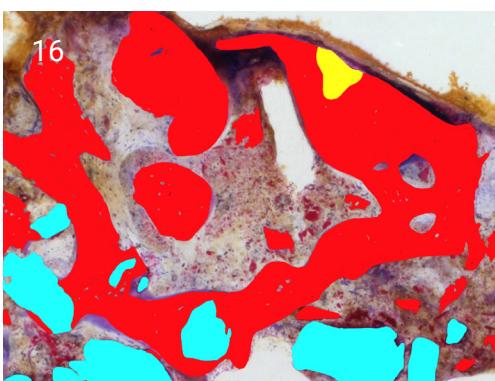

13. After fitting final screw-retained restoration. Outcome 7 months after initial socket grafting; 4 months after implant placement.

14. Bone biopsy sample.

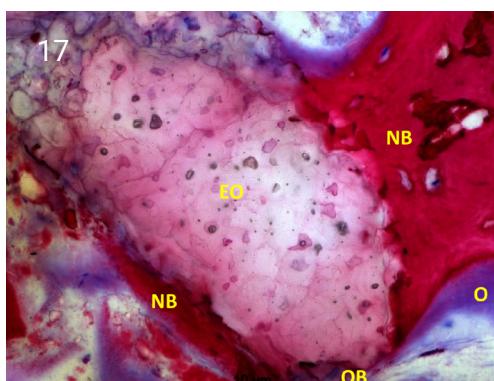

15. Histomorphometric analysis from University of Freiburg.

16. Newly-formed vital bone: 48.12%, residual EthOss particles: 8..11%

A biphasic matrix for true bone regeneration.
Built in membrane function, high graft stability.

17. EthOss particle (EO) close up, with osteoblasts (OB), osteoid (O) formation and new bone trabeculae (NB).

SOCKET GRAFT CASE STUDY

18. Initial pa x-ray.

19. After extraction and socket grafting.

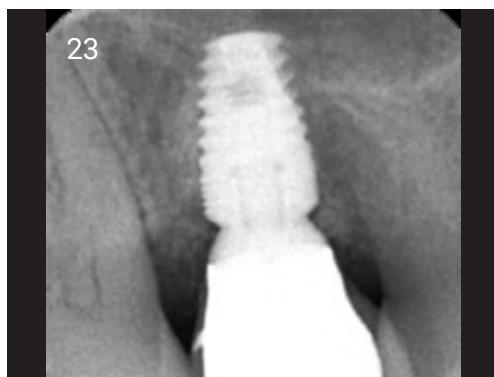

20. 4 weeks post-op.

21. 12 weeks post-op.

22. After implant placement and additional grafting.

23. After 4 months, final restoration.

A biphasic matrix for true bone regeneration.
Built in membrane function, high graft stability.
